Brand: *More Life Nutrition* | **Product:** *Power Cups*

I. Marketing Strategy

A. Brand Overview

More Life Nutrition is a Tunisian food brand headquartered in Kelibia, Nabeul, founded and led by Chaima Zouari. The brand was created with a clear mission: to make healthy eating genuinely enjoyable for Tunisian consumers by offering snacks that deliver both real nutritional value and authentic indulgence. Its flagship product, Power Cups, are 50g dark chocolate cups filled with crunchy nut butter in 7 distinct flavors — peanut, pistachio, hazelnut, almond, salted cashew, Sunflower Seed and sesame.

Power Cups are marketed as containing no added sugar, no added oil, and a rich source of plant-based protein, making them ideal for athletes, busy professionals, and health-conscious consumers who refuse to choose between pleasure and wellness. The product is Halal-certified and manufactured locally in Tunisia, reinforcing a brand identity built on local pride, ingredient transparency, and sustainable, ethical production.

More Life Nutrition sells through its own e-commerce platform (morelife.tn), select specialty health retailers (Tunisiebio), and mainstream supermarkets (Aziza), with a social media presence across Instagram (~23,700 followers), Facebook, and TikTok.

B. Marketing Strategy

1. Context Analysis

Before defining how More Life Nutrition should compete, it is essential to understand the environment in which it operates. The following four-context analysis — Customer, Business, Internal, and External — provides that diagnostic foundation.

• Customer Context

More Life Nutrition's customers are primarily health-conscious urban consumers in Tunisia. They are typically aged 18–40, digitally active, and increasingly skeptical of ultra-processed snacks. They seek products that are both nutritionally sound and genuinely satisfying — what is increasingly described as "guilt-free indulgence." These consumers actively read ingredient labels, compare nutritional information, and are influenced by fitness influencers and peer recommendations on social media. They are willing to pay a premium for quality, authenticity, and transparency, but expect those claims to be substantiated by visible evidence (certifications, nutrition facts, real ingredient lists).

A secondary customer segment comprises parents seeking healthier snack alternatives for their children and households, particularly those in urban, middle-to-high income brackets who prioritize natural, additive-free food products.

• Business Context

More Life Nutrition operates in Tunisia's emerging premium health-food segment — a niche that sits at the intersection of the country's growing wellness culture and its deeply embedded tradition of nut-based, natural foods. The brand competes in the broader snack market while positioning itself as a premium alternative to both mass-market chocolate confectionery and imported protein bars.

The business operates primarily direct-to-consumer (D2C) through its own website and limited retail partnerships. It has not yet achieved meaningful distribution scale, which constrains its revenue potential despite strong product differentiation.

• Internal Context

More Life Nutrition's core internal asset is its product itself: a genuinely differentiated snack with clean ingredients, an appealing format, and a compelling health story. The brand benefits from local production (reducing import dependency), Halal certification, and a modern bilingual packaging design that conveys premium quality. The founder-led, start-up-scale operation allows agility and authenticity in brand communication.

However, internal limitations are significant. The brand operates without published nutritional data (a critical credibility gap for a health-positioned product), faces persistent inventory and stock management challenges (products regularly appear as "out of stock" on its own website), and has not yet invested in a structured digital content strategy. Production capacity is constrained, The brand does not clearly communicate internationally recognized food safety certifications (such as HACCP or ISO 22000), which may limit its credibility and ability to access export markets..

• External Context

Tunisia's snack and health-food market is at an early but accelerating stage of development. Consumer awareness of health and wellness is rising, particularly in urban centers, driven by social media, the global fitness trend, and increasing access to nutritional information. The MENA region more broadly is seeing a surge in demand for Halal-certified, clean-label, protein-rich snacks — a trend that positions Power Cups well for regional expansion.

The competitive landscape includes global brands (Reese's, Bombbar, Barebells) with higher brand recognition but which lack local or Halal credentials, alongside emerging Tunisian health-food brands (DATY, Vipa, Campi, Nutridiet) that target overlapping consumer segments. Mass-market chocolate and pastries also compete on price, though not on nutritional positioning. Digital channels — particularly Instagram and TikTok — are the primary battleground for consumer attention in this category.

Strategic implication: The analysis reveals that More Life Nutrition operates in a highly favourable market driven by rising health consciousness and digital consumption. However, internal execution gaps — particularly stock availability and lack of nutritional transparency — currently prevent the brand from fully capturing this opportunity. Addressing these weaknesses is essential before scaling marketing efforts.

2. Positioning Statement

"For health-conscious Tunisian consumers who want to indulge without compromise, More Life Nutrition Power Cups are the premium guilt-free snack that delivers real nut-butter richness inside dark chocolate — with no added sugar and no added oil — unlike imported candy bars or generic protein products. Power Cups let you eat what you love without giving up what you believe in."

Strategic implication: This positioning must be consistently reinforced across all marketing touchpoints to prevent competitors from entering and diluting this high-value market space.

3. Segmentation Analysis

More Life Nutrition's market can be segmented across three primary dimensions:

• Demographic Segmentation

- Age: Primary segment 18–30(fitness-oriented young adults and students); secondary segment 30–50 (professionals and parents).
- Income: Middle to high-income individuals — consumers willing to pay a premium for health, quality, and ingredient transparency.
- Occupation: Students, gym-goers, urban professionals, health coaches, and parents in dual-income households.
- Place: The brand primarily targets urban consumers in major Tunisian cities such as Tunis, Sousse, and Sfax, where health awareness and purchasing power are higher. Secondary opportunities may exist in the Maghreb region and MENA diaspora communities, which represent potential expansion markets rather than currently confirmed core segments

• Psychographic Segmentation

- Lifestyle: Health-conscious, fitness-oriented, or wellness-aspiring consumers who integrate physical activity and mindful eating into daily life.
- Values: Authenticity, ingredient transparency, local pride, sustainability, and the rejection of unnecessary additives.
- Interests: Fitness, sports nutrition, healthy cooking, clean eating, and supporting local Tunisian businesses.
- Attitude: "Better-for-you" mindset — open to spending more for a product that aligns with their values and health goals.

• Behavioral Segmentation

- Purchase Behavior: Repeat buyers who prioritize quality and trust; influenced by peer recommendations, social media, and influencer endorsements before purchase.
- Occasion: Daily snacking, pre/post-workout nutrition, on-the-go energy, gifting, and family consumption.
- Benefits Sought: Taste satisfaction, protein content, clean ingredients, convenience, and alignment with a health-conscious identity.
- Loyalty: High potential for brand loyalty once trust is established — particularly among athletes and fitness communities who integrate snacks into routine.

4. Target Market

Based on the segmentation analysis, More Life Nutrition's primary target market comprises health-conscious urban consumers aged 18–40 in Tunisia who are actively seeking snack options that do not compromise between taste and nutritional integrity. This includes gym-goers and athletes who view protein-rich snacks as a functional part of their nutrition plan; keto and clean-eating consumers who scrutinize ingredient labels; and young professionals who want premium, satisfying snacks that reflect their values and lifestyle.

The secondary target market includes conscious parents aged 30–50 in middle-to-high income urban households, who seek natural, additive-free snacks for their families, and B2B buyers such as gyms, health cafés, and specialty retailers looking to stock premium Tunisian health-food products.

Internationally, the Tunisian and North African diaspora in France, Canada, and Germany represents an additional high-value segment — consumers with emotional and cultural ties to Tunisian products, strong online purchasing habits, and above-average disposable income.

Key Insight: The brand should adopt a focused targeting strategy, prioritising health-conscious urban consumers aged 18–35 as its core growth engine, while selectively expanding into secondary segments such as parents and diaspora markets through tailored messaging and distribution channels.

5. Marketing Mix (4Ps)

5.1 Product

Power Cups are 50g packs, each containing two pieces of dark chocolate filled with crunchy nut butter. The current product range covers six permanent flavors:

- Peanut Butter Cup — the entry-level, most accessible flavor; ideal for everyday snacking.
- Pistachio Cup — the premium, signature flavor; highest price point and strongest differentiation.
- Hazelnut Cup — familiar, indulgent taste profile targeting consumers transitioning from mainstream chocolate.
- Almond Cup — positioned for the clean-eating and keto segment given almond's nutritional reputation.
- Salted Cashew Cup — trend-aligned flavor appealing to gourmet and premium snack consumers.
- Sesame Cup — culturally resonant in MENA; appeals to traditional taste preferences.
- Sunflower Seed Cup — an accessible, allergen-friendly option broadening the brand's reach beyond tree-nut consumers.

Each cup contains only three ingredients: the relevant nut, dark chocolate, and natural mineral salt — no emulsifiers, no preservatives, no fillers. This ingredient minimalism is a core product strength and must be communicated visibly on all packaging and marketing materials.

Recommended product development priorities: (1) publish full nutrition facts on all packaging; (2) introduce a 100g "Sport Pack" format for gym and post-workout occasions; (3) launch a seasonal limited edition (date-sesame for Ramadan) to create purchase urgency and cultural resonance; (4) develop a taster multipack (3×50g) to lower the barrier to first purchase.

5.2 Price

Flavor	Single Pack (TND)	10× Bulk Pack (TND)	Discount on Bulk
Peanut Butter	2.60 TND	24.00 TND	8%
Sunflower Seed	3.50 TND	—	—
Sesame	3.20 TND	—	—
Almond	3.80 TND	35.00 TND	8%
Salted Cashew	4.40 TND	39.60 TND	10%
Hazelnut	5.40 TND	49.80 TND	8%
Pistachio	6.50 TND	58.50 TND	10%

Multi-flavor bundle packs are also available via Tunisiebio: Lot de 7 (all 7 flavors) at 26.00 TND (10% off); Lot de 16 — 4×4 flavors at 54.00 TND (11% off); Lot 3×10 at 105.00 TND (3% off); Lot 5×10 at 198.00 TND (4% off). This pricing strategy is justified by the premium ingredient quality, ethical production, and health positioning. Power Cups are competitively priced relative to imported protein bars (typically 3–6 TND in Tunisia) while commanding a premium over mass-market chocolate (imported Reese's: ~3 TND).

5.3 Place (Distribution)

More Life Nutrition currently employs a multi-channel distribution approach, combining direct-to-consumer online sales with selective retail placements. The current channel mix includes:

- **Owned E-Commerce (morelife.tn): Primary direct sales channel with free shipping above 99 TND. Currently affected by stock availability issues — resolving this is the single most urgent operational priority.**
- Specialty Health Retailers: Tunisiebio stocks Power Cups in both individual and bulk formats, reaching health-food shoppers who are already pre-sold on clean-label products.
- Mainstream Supermarkets (Aziza): Confirmed presence provides broader reach and brand visibility, though distribution appears inconsistent.

Short-term distribution expansion priorities: (1) secure placement in additional mainstream supermarket chains (Mg Tunisia,); (2) partner with gym reception desks and fitness studios for point-of-impulse placement aligned with the target consumer context; (3) list on Glovo and Yassir Tunisia for rapid urban delivery; (4) explore listing on UAE for e-commerce expansion.

5.4 Promotion

The promotional approach for Power Cups must move beyond product photography to build genuine emotional resonance with the target audience. Marketing the story, the ingredients, and the people behind the product will create deeper and more durable consumer connections than any product-focused advertising.

- **Heritage & Ingredient Storytelling as Core Strategy: Every cup has a story — the farmer who grew the pistachios, the minimal ingredient philosophy, the Tunisian factory. Behind-the-scenes content showing ingredient sourcing, and team culture creates authentic connection that product ads cannot.**

- **Influencer & Fitness Community Collaborations:** Partner with 5–10 Tunisian fitness micro-influencers (5K–50K followers) for authentic, organic-feeling content. Macro-influencers (100K+) can amplify key campaign moments (product launches, Ramadan edition). Prioritize creators who have genuine fitness or wellness credentials, not just lifestyle aesthetics.
- **User-Generated Content (UGC) & Community Building:** Activate a dedicated hashtag campaign (#PowerUpYourDay or #PowerCupChallenge) encouraging customers to share how they incorporate Power Cups into their routines. Feature UGC prominently on the brand's own channels to build social proof and community.
- **Structured Social Media Content Calendar:** Post a minimum of 3× per week across Instagram and TikTok, rotating between product content, lifestyle integration, nutritional education, process storytelling, and UGC features. Facebook should target the 30–50 parent segment and diaspora community.
- **Educational Content Marketing:** Publish monthly blog articles on morelife.tn targeting keywords such as "healthy snacks Tunisia," "high protein snack sans sucre," and "collation saine sportif." This builds organic SEO traffic and establishes the brand as a nutritional authority, not just a product seller.
- **Email Marketing:** Build a subscriber list through a welcome discount offer on the website. Nurture with a regular newsletter featuring new products, nutritional tips, and exclusive early access offers for loyal customers.

Strategic implication: While the **product and pricing** strategies **strongly support the brand's premium positioning**, **distribution and promotion** remain **underdeveloped**. Immediate focus should be placed on improving product availability and strengthening digital content execution to fully leverage the existing product advantage.

II. Marketing Environment

Understanding More Life Nutrition's marketing environment requires analyzing both the microenvironment — the actors closest to the brand — and the macroenvironment — the broader forces shaping the market. Together, these two layers reveal the opportunities to exploit and the risks to manage.

A. Microenvironment Analysis

1. Customers

Customer Segments & Profiles

Segment	Characteristics	Example Profile	Buying Behavior
Athletes & Gym-Goers	Fitness-oriented, protein-conscious, reads labels, active daily routine	A 25-year-old personal trainer in Tunis buying Power Cups as a post-workout snack.	Research-driven; compares nutritional data; buys in bulk; highly influenced by fitness influencers.
Health-Conscious Professionals	Busy, urban, values premium quality and ingredient transparency; willing to pay more for "clean" products.	A 32-year-old marketing manager who replaces her afternoon candy bar with a pistachio cup.	Impulse + habitual; influenced by brand story and aesthetics; prefers online ordering for convenience.
Conscious Parents	Age 30–50; middle-to-high income; seeks natural, additive-free snacks for family.	A mother in Sousse buying peanut cups as a school snack alternative for her children.	Ingredient-trust driven; buys in bulk; brand-loyal once trust is established; influenced by peer recommendations.

Tunisian Diaspora	Emotionally connected to Tunisian identity; online shoppers; higher disposable income.	A Tunisian-French professional in Paris ordering pistachio cups for a nostalgic taste of home.	Loyalty-driven; nostalgia-influenced; strong word-of-mouth within diaspora communities; Facebook and WhatsApp groups.
B2B Buyers (Gyms, Cafés, Retailers)	Health-food stores, gyms, specialty cafés seeking differentiated premium products.	A fitness studio in La Marsa stocking Power Cups at reception for post-class sales.	Seeks quality consistency, bulk pricing, reliable logistics; prefers direct brand communication.

Customer Needs & Expectations

- **Nutritional Transparency:** Consumers expect clear nutritional information.
- **Ingredient Authenticity:** Customers want minimal, real ingredients they can pronounce and verify. The current "only 3 ingredients" story is a powerful asset that needs louder communication.
- **Halal Compliance:** Non-negotiable for the Tunisian and MENA market. The existing Halal certification is a genuine strength that should be featured more prominently.
- **Taste Satisfaction:** Health-conscious consumers are not willing to sacrifice taste — Power Cups' real nut butter and dark chocolate format directly addresses this expectation.
- **Availability & Reliability:** Persistent stockouts and an "out of stock" website create a trust-breaking experience. Operational reliability is a prerequisite for brand loyalty.

2. Competitors

Direct Competition

Competitor	Strengths	Weaknesses	Future Direction	Market Behavior
DATY (Tunisia)	Strong natural/no-added-sugar positioning; established in health stores; strong local brand recognition.	Date-based — different product format; less protein-focused; limited flavor variety.	Expand into new natural snack formats; grow online channel.	Proactive; steady; health-store focused.
Nutridiet (Tunisia)	Established diet brand with strong retail network (pharmacies, boutiques); broad product range.	Clinical/medical positioning lacks emotional appeal; higher prices; not social-media native.	Digital marketing expansion; new product launches targeting younger consumers.	Conservative; credibility-based; loyal older demographic.
Bombbar / Barebells (Imported)	Global brand recognition; strong protein claims with published data; wide flavor range.	Not locally produced; no Halal certification; higher price due to import costs; no cultural connection.	Continue expanding MENA presence through e-commerce.	Aggressive digital marketing; influencer-heavy strategy.

Reese's (Imported)	Iconic global brand; mass recognition; low price point; immediate taste satisfaction.	22g sugar per 51g; no Halal cert; no health claims; no local identity.	Maintain mass-market presence; no health pivot anticipated.	Reactive; volume-focused; no premium or health repositioning.
---------------------------	---	--	---	---

Indirect Competition

- Pastry shops: Offer loose nuts and chocolate products at lower prices but with no branding, health claims, or quality consistency.
- Homemade Nut Butters & DIY Culture (Pinterest, TikTok): Rising trend of consumers making their own nut butters at home — a behavioral substitute that can reduce purchase frequency.
- Mass-Market Supermarket Confectionery: Cheap imported chocolate bars that compete on impulse purchase occasions, particularly for price-sensitive consumers.

Competitive Strategies

- **Differentiation:** Emphasize the "only 3 ingredients" story and Halal + local production credentials through process videos and visible certifications.
- **Nutritional Credibility:** Publish full, verified nutrition facts across all touchpoints.
- **Community Building:** Foster a loyal fitness and wellness community around the brand rather than competing on price — emotional loyalty is far more durable than price-based switching behavior.

3. Suppliers

Supplier	Role	Key Challenge	Strategic Response
Nut Suppliers (Regional & International)	Source peanuts, pistachios, hazelnuts, almonds, cashews, and sesame — the primary ingredient in all Power Cups flavors.	Price volatility: pistachio and cashew prices have spiked globally; currency fluctuation affects import costs.	Negotiate long-term supply contracts with capped pricing; identify secondary suppliers; explore Tunisian-sourced alternatives where available.
Cocoa/Dark Chocolate Suppliers	Provide the dark chocolate coating — sourced from Africa or Latin America via international brokers.	No domestic cocoa production in Tunisia; entirely import-dependent; subject to global commodity price swings.	Maintain dual-supplier relationships; explore fixed-price annual contracts; consider sustainable cocoa certification for brand value.
Packaging Manufacturers	Supply the custom-printed 50g plastic trays and outer packaging — currently imported (Asia or EU).	Long lead times; minimum order quantities; risk of packaging delays disrupting production.	Explore regional packaging suppliers; maintain minimum 3-month packaging inventory; design modular packaging to allow flavor-variant flexibility.

Contract Manufacturing (if scaled)	If production capacity is exceeded, a contract manufacturer in Tunisia could produce to More Life's specifications.	Risk of quality inconsistency and formula leakage.	Develop detailed production specifications and quality control protocols before engaging any co-manufacturer.
------------------------------------	---	--	---

Supplier Relationship Strategy

- Establish long-term pricing agreements with key nut suppliers to hedge against commodity price spikes — the single largest cost risk in the supply chain.
- Dual-source all critical ingredients to prevent single-supplier dependency from causing production shutdowns.
- Maintain a minimum 90-day raw material inventory buffer to absorb supply chain disruptions without affecting product availability.

4. Intermediaries & Distribution Partners

E-Commerce & Logistics

- First Delivery & Aramex Tunisia: Current delivery partners for nationwide e-commerce fulfillment. Expand to include real-time tracking capabilities to meet growing customer expectations for delivery transparency.
- Glovo & Yassir Tunisia: On-demand delivery platforms popular in urban Tunis — critical for reaching impulse-purchase occasions and younger consumers who expect rapid delivery.

Payment Gateways

- Local payment methods (e-Dinar, D17, Mobiflouss, cash-on-delivery) must be maintained to accommodate the full spectrum of Tunisian digital payment behavior — not all consumers use international payment cards.

Retail Partners

- Tunisiebio: Specialty health retailer — ideal brand-fit; high trust among the health-conscious segment.
- Aziza Supermarkets: Confirmed retail presence; provides broader brand visibility beyond the health-food niche.
- Gyms & Fitness Studios: Untapped but high-value channel — direct placement at reception desks aligns the purchase occasion with the brand's nutritional positioning.

5. Publics

Public	Strategic Role	Engagement Approach
Media & Food Journalists	Build brand credibility and reach audiences that paid advertising cannot penetrate.	Prepare a professional press kit with product samples, high-quality photography, brand story, and nutritional data. Target food and wellness editors at Tunisian publications (Darna, Réalités, Tunisia Today).
Fitness Influencers & Nutritionists	Provide authentic third-party endorsement to the target consumer segment.	Seed product to credible fitness micro-influencers; consider a paid partnership with a licensed Tunisian nutritionist for content that validates health claims.

Local Food Associations	Validate the "made in Tunisia" and ethical production narrative.	Explore membership or endorsement from local food associations; feature any quality or origin certifications prominently.
Government & Cultural Institutions	Access to grants, subsidies, and export support programs for Tunisian food SMEs.	Apply for relevant SME support programs; explore partnership with the Agence de Promotion des Exportations (APEX-Tunisie) for MENA expansion support.
Online Health Communities (Facebook Groups, Reddit)	Word-of-mouth at scale — particularly valuable for a brand with a limited paid media budget.	Participate authentically in Tunisian fitness and nutrition communities; seed product to community opinion leaders; monitor and respond to all brand mentions.

B. Macroenvironment Analysis (PESTEL)

The following PESTEL analysis identifies **the broader forces** that create both opportunities and threats for More Life Nutrition's Power Cups, with direct implications for strategic planning.

1. Political Environment

- The Tunisian government actively supports food producers through grants and subsidies — More Life Nutrition, as a locally produced, Halal-certified food brand, is positioned to benefit from these programs.
- Export promotion programs (APEX-Tunisie) offer resources that could accelerate the brand's MENA expansion ambitions, particularly in GCC markets where Halal-certified Tunisian products are positively perceived.
- Political instability in Tunisia or changes to trade regulations could disrupt import logistics (particularly for cocoa and specialized packaging)
- A stable regulatory environment for food labeling and health claims is needed — anticipated updates to Tunisian food labeling regulations may require the brand to publish formal nutritional data (a change that would benefit rather than harm a clean-ingredient brand).

2. Economic Environment

- premium food segments continue to see spending from Tunisia's upper-middle class and expatriate communities despite broader economic challenges — the premium segment is partially insulated from general consumer spending pressure.
- High inflation and Tunisian dinar volatility increase the cost of imported ingredients (cocoa, specialty nuts), directly threatening margins if not managed through supply contracts and pricing strategy.
- Rising disposable income among young urban professionals creates a growing addressable market for premium snacks priced above mass-market confectionery.

3. Social Environment

- Growing health and wellness consciousness in Tunisia and across MENA is the single most favorable macro-trend for Power Cups. Consumers increasingly seek snacks that are nutritionally meaningful, not just calorically satisfying.
- The global "clean label" movement — consumers demanding short ingredient lists with recognizable, natural components — directly validates Power Cups' three-ingredient formula.
- Rising interest in supporting local Tunisian brands (local pride) creates a favorable disposition toward home-grown health food products over imported alternatives.
- Social media's dominant role in food discovery and purchasing decisions among the 18–35 demographic means that Instagram and TikTok presence is not optional — it is the primary battleground for consumer attention in this category.
- Growing fitness culture in urban Tunisia (gym memberships, running clubs, CrossFit) is creating a natural, rapidly expanding community of consumers for whom protein-rich, clean snacks are a routine necessity.

4. Technological Environment

- Tunisia's internet penetration reached approximately 80% in 2024 (~9.96 million users online), enabling broad e-commerce reach for digital-first brands.
- Instagram, TikTok, and Facebook are the dominant consumer platforms in the target demographic — content-led, visual storytelling strategies on these platforms offer cost-effective brand building at scale.
- Augmented Reality (AR) tools that allow consumers to visualize products in context are emerging as a powerful conversion tool for premium lifestyle products — a future opportunity for Power Cups to integrate into its e-commerce experience.
- Inventory management and order tracking software can resolve the persistent stockout and fulfillment reliability issues that currently undermine customer trust.

- AI-powered personalization tools (product recommendations, targeted email sequences, retargeting ad campaigns) can dramatically improve conversion rates from the brand's existing digital audience.

5. Environmental Forces

- Growing consumer and regulatory pressure toward sustainable packaging creates both a risk (compliance costs) and an opportunity (brand differentiation for eco-conscious consumers).
- More Life Nutrition's use of natural, minimal ingredients and avoidance of artificial additives and preservatives is inherently aligned with sustainability values — this should be communicated as a brand asset, not just a product feature.
- Climate change and resource scarcity may affect the availability and cost of key nut crops, particularly pistachios and hazelnuts, over the medium to long term — diversifying the supplier base mitigates this risk.
- An eco-friendly packaging initiative (biodegradable trays, sustainable inks) would strengthen brand positioning among the eco-conscious segment and differentiate from competitors using standard plastic packaging.

6. Legal Environment

- Tunisian food labeling regulations require nutritional information on packaged food products — the current absence of published nutritional data on Power Cups packaging represents a compliance risk as well as a credibility gap.
- Halal certification is maintained and displayed — this is legally and culturally non-negotiable for the Tunisian and MENA market and must be renewed and displayed prominently on all packaging versions.
- Intellectual property protection for original product names, logo design, and packaging should be formally registered to prevent imitation by better-resourced competitors, particularly as the brand grows.
- E-commerce regulations (consumer protection, privacy, data handling, clear return policies) must be fully complied with on the morelife.tn platform, particularly if the brand expands to EU or GCC markets with more stringent consumer protection laws.
- Export to MENA and EU markets will require additional certifications (HACCP, ISO 22000, and potentially EU-specific health claim compliance) — initiating this certification process now is a strategic investment in future market access.

Key Insight: The PESTEL analysis reveals a broadly favorable macro-environment for Power Cups: tailwind trends in health consciousness, digital commerce, and local brand preference. The primary risks are operational (ingredient costs, supply chain) and regulatory (labeling compliance, export certifications) — both manageable with proactive planning.

III. SWOT Analysis

The SWOT analysis synthesizes the findings from the context analysis, microenvironment, and macroenvironment into a strategic assessment of More Life Nutrition's current competitive position. It provides the diagnostic foundation for all subsequent strategic decisions.

A. SWOT Matrix

STRENGTHS 	WEAKNESSES 
• "Healthy indulgence" positioning — bridges taste and nutrition at a level no direct Tunisian competitor currently matches. • Six distinct nut-butter flavors providing variety, cross-selling opportunities, and broad flavor-preference coverage. • Local Tunisian production — avoids import duties, supports a "made in Tunisia" brand narrative, and enables agile production response. • Halal certification — non-negotiable competitive credential for Tunisia and the broader MENA export market. • Minimal, clean ingredient list (3 ingredients only) — highly differentiated vs. mass-market alternatives and strongly aligned with clean-label consumer trends. • Modern, bilingual (English/Arabic) premium packaging — color-coded by flavor; supports premium price perception.	• No published nutritional data (calories, protein, fat, sugar) — fundamentally undermines the health claims that are the brand's core competitive advantage. • Persistent website out-of-stock display — the first digital impression for many customers actively destroys purchase intent before it can convert. • Limited brand awareness beyond niche health-food circles — no significant mass-market or diaspora recognition yet. • Small production scale — risk of stockouts constraining growth; lack of HACCP/ISO 22000 certification limits export eligibility. • Fragmented, inconsistent digital presence — platforms active but with low posting frequency, zero reviews, and no content strategy. • No preservatives — shorter shelf life complicates wider retail distribution and export logistics.
OPPORTUNITIES 	THREATS 
• Rising health-consciousness and clean-label demand in Tunisia and MENA — the most powerful macro-trend in the brand's favor. • Tunisia's e-commerce growth (projected \$214.3M by 2025, CAGR 10.2%) creates a large and growing digital sales channel. • Export to Algeria, Morocco, and GCC — Halal certification and clean-label positioning are market-entry credentials that travel well. • New product formats: 100g Sport Pack, seasonal Ramadan limited edition, taster multipacks — all achievable without new ingredients. • Partnerships with gyms, sports clubs, fitness cafés and nutrition professionals for both direct sales and brand endorsement. • TikTok and Instagram Reels first-mover advantage in the Tunisian clean-snack niche	• Global competitor brands (Reese's, Bombbar, Barebells) with higher brand recognition, published nutritional data, and larger marketing budgets. • Nut and cocoa commodity price volatility — directly threatens margins, particularly for pistachio and cashew flavors. • Ease of concept imitation — the nut-butter cup format is simple to replicate; a better-resourced competitor could launch a similar product with superior distribution. • Consumer skepticism toward unverified "free-from" health claims — without published nutritional data, health claims are vulnerable to dismissal or distrust. • Regulatory tightening on food labeling and health claims in export markets (EU, GCC) may require costly reformulations or certification investments.

— the content opportunity is largely unclaimed.	Economic pressure on discretionary spending in Tunisia may push some price-sensitive consumers toward cheaper mass-market alternatives.
---	---

 **Key Insight:** *Power Cups hold the best "healthy indulgence" position in the competitive set — combining high health credentials with high taste satisfaction at a competitive price. The critical gap versus all competitors is the absence of published nutritional data, which every direct competitor provides. Closing this gap is the single highest-leverage action available to the brand.*

D. Overall SWOT Conclusion

More Life Nutrition's Power Cups are genuinely well-positioned in the emerging "healthy indulgence" segment — a niche that no direct Tunisian competitor currently occupies with the same combination of taste satisfaction, clean ingredients, and cultural authenticity. The brand has real and defensible strengths: a differentiated product, a compelling clean-ingredient story, local production, and Halal credentials that travel across the MENA region.

However, the brand's ability to convert these strengths into market leadership is currently constrained by two categories of weakness that must be urgently addressed: (1) operational reliability — specifically the stockout problem and absence of nutritional data —

The strategic imperative is clear: stabilize operations and establish nutritional credibility first, then scale digital and distribution investment on that foundation. Attempting to grow aggressively before these fundamentals are in place would be building on sand

II. Digital Marketing Environment

A. Digital Marketing Micro-Environment Analysis

1. Customers

1.1 Modern Customer Journey for Power Cups

The following outlines the five-stage digital customer journey for a representative Power Cups buyer — a 26-year-old gym-goer in Tunis named Yasmine.

Stage	Channels	Touchpoint Scenario	Customer Reaction
1. Awareness	Instagram Reels, TikTok, influencer stories	Yasmine sees a 30-second Reel of a fitness influencer slicing open a Pistachio Power Cup post-workout. The caption reads: '3 ingredients. No sugar. Real protein.' The visual quality and authenticity stop her scroll.	She pauses, double-taps, saves the Reel, and visits the @morelif_tn profile. She browses the feed and is struck by the clean aesthetic and transparent ingredient content.
2. Consideration	SEO-optimised website, Instagram highlights, blog, customer reviews	That evening, Yasmine searches 'healthy chocolate snack Tunisia' and finds a morelife.tn blog article ranking on page one. She reads about the six flavours, the no-added-sugar formula, and the Kelibia production story. She watches a production process video pinned in the Instagram highlights.	Impressed by the ingredient transparency, she follows the account, browses the product pages, and reads peer reviews. She adds the Pistachio Cup to her cart but does not yet complete the purchase.
3. Purchase / Conversion	Retargeting ads, Instagram Shop, email, promo code	Two days later, a retargeted Instagram ad shows the exact Pistachio Cup she viewed, now paired with a 15% first-order discount code from a fitness influencer she trusts. She clicks through to morelife.tn, finds a smooth mobile checkout, and sees her preferred payment method (D17) available.	She completes the purchase, selecting a 10× bulk pack for better value. The confirmation email arrives instantly with an estimated delivery window and a thank-you note from the founder.
4. Post-Purchase Engagement	Email, WhatsApp, packaging insert, social media	Her order arrives within two days, packaged cleanly. Inside is a bilingual card with the product's three ingredients listed clearly and a QR code linking to a behind the scenes video. A follow-up email arrives asking for her review and offering early access to the new Salted Cashew bulk pack.	Yasmine posts an unboxing Story on Instagram tagging @morelif_tn. She submits a five-star review on the website and replies to the follow-up email asking about the Sport Pack format.

Stage	Channels	Touchpoint Scenario	Customer Reaction
5. Advocacy & Loyalty	Instagram UGC, referral programme, loyalty newsletter	A month later, Yasmine receives a newsletter with a referral code offering 20% off for both her and a friend. She shares the code in her gym WhatsApp group. She is featured in More Life's weekly UGC repost and becomes a recognisable face in the brand community.	She has become a brand advocate — not just a repeat buyer. Her referral generates three new first-time orders. She begins tagging Power Cups in her workout posts without being prompted.

1.2 Consumer Behaviour Analysis

Understanding the digital behaviour patterns of Power Cups' consumers is essential for allocating channel investment and crafting content that converts.

Demand Analysis

- Consumer Motivations: Health-consciousness is the primary motivator — consumers are actively seeking snacks that align with fitness goals and clean-eating values. Secondary motivators include taste satisfaction (the refusal to sacrifice indulgence for health), local pride (preference for Tunisian-made products), and ingredient transparency (the desire to verify what they are eating).
- Selection Process: Power Cups buyers are research-driven. They compare nutritional information across competing products before purchasing, consult fitness influencer reviews, and read ingredient labels closely.
- Price Sensitivity: The primary segment (18–40, urban, health-conscious) demonstrates limited price sensitivity when product quality and ingredient transparency are clearly communicated. Bundle pricing (10× packs) accelerates higher-value basket decisions.

Digital Consumer Behaviour

- Platform Preferences: Instagram is the dominant discovery channel (Reels, Stories, product carousels). TikTok drives reach among 18–28 consumers through short-form content. Facebook serves the 30–50 parent and diaspora segment. WhatsApp is critical for post-purchase support and community engagement in Tunisia.
- Content That Converts: Process and ingredient-transparency videos (showing the three-ingredient manufacturing process) consistently outperform standard product photography in the health-food category. Peer testimonials, before/after workout content, and nutritionist endorsements drive the highest trust signals.
- Purchase Trigger: Influencer promo codes, first-order discounts, and free-shipping thresholds are the most effective conversion levers for first-time buyers. For repeat buyers, early access to new flavours and loyalty bundle pricing drive retention.

Key Insight: More Life Nutrition must design every digital touchpoint around one truth: health-conscious consumers buy trust before they buy product. Nutritional data, certifications, and authentic storytelling are not optional extras — they are the price of entry.

2. Digital Competitors

The digital competitive landscape for Power Cups spans local Tunisian health-food brands with an established digital presence and imported global brands that invest heavily in influencer-led content.

Direct Digital Competition

Competitor	Digital Strengths	Digital Weaknesses	Digital Behaviour
DATY (Tunisia)	Consistent posting cadence; strong visual identity; well-established Instagram presence; effective use of product-lifestyle imagery.	Limited video content; minimal TikTok presence; no published nutritional data in digital content; low influencer investment.	Steady, content-led strategy focused on natural and no-added-sugar positioning. Low paid-media investment.
Nutridiet (Tunisia)	30K+ Instagram followers; regular educational content on nutrition; strong credibility positioning via clinical/dietitian tone.	Content tone is clinical rather than aspirational — low emotional resonance with younger fitness consumers; limited Reels and video content.	Conservative, credibility-focused. High organic trust but low entertainment value — unlikely to compete for TikTok-native audiences.
Bombbar / Barebells (Imported)	Globally recognised influencer strategy; high production-quality content; published macro data prominently featured; wide flavour range creates content variety.	No Halal certification; no local or cultural identity; premium import price; content not localised for Tunisian or MENA audiences.	Aggressive global influencer partnerships; heavy paid-media investment. Not directly competing for culturally-resonant positioning.
Reese's (Imported)	Iconic global brand recognition; high share of voice in confectionery; mass-appeal aesthetics.	Zero health positioning; no digital engagement with Tunisian market; no Halal cert; not relevant in the health-food content space.	Volume-focused; global campaigns not tailored to Tunisian consumers. Not a content competitor in the health niche.

Indirect Digital Competition

- **DIY Fitness & Nutrition Content (TikTok, YouTube, Pinterest):** A growing segment of Tunisian consumers creates their own nut butter and healthy snack content at home, inspired by social media tutorials. This behavioural substitute reduces purchase frequency among the most nutrition-engaged segment.
- **Imported Protein Bars on Glovo & Yassir:** The convenience of on-demand delivery from urban delivery apps means that even during an impulse snack moment, Power Cups are competing with imported alternatives if they are not listed on these platforms.
- **Mass-Market Confectionery (Instagram Shopping Ads):** Brands like Reese's and local mass-market chocolates increasingly run paid Instagram ads targeting the same 18–35 demographic, competing for attention at the awareness stage even without overlapping on positioning.

Porter's Five Forces — Digital Application for Power Cups

Force	Level	Digital Implications for Power Cups
Threat of New Entrants	Moderate	Low capital barriers to launching a health-snack brand on Instagram or TikTok make the digital space accessible to new competitors. However, building authentic brand trust, an engaged community, and SEO authority takes time — a first-mover advantage that More Life Nutrition should move urgently to secure.
Bargaining Power of Suppliers	Moderate–High	Ingredient cost volatility (especially pistachio and cashew) directly affects the ability to maintain premium pricing online. If prices must rise, the brand's digital content must pre-emptively justify the premium through quality storytelling and transparency content.
Bargaining Power of Buyers	Moderate	Consumers can compare prices, ingredients, and reviews across multiple brands within seconds on Instagram or Google.
Threat of Substitutes	Moderate–High	DIY content culture and imported protein bars (easily discoverable and orderable via Glovo) represent meaningful digital substitutes. Power Cups must own the 'local + clean + indulgent' positioning before a better-resourced competitor claims it.
Competitive Rivalry	High	All direct competitors maintain active digital presence. The battle for the health-conscious Tunisian consumer is fought daily on Instagram, TikTok, and Google Search. Inconsistent posting put Power Cups at a structural disadvantage in this rivalry.

3. Digital Suppliers & Technology Partners

Beyond physical ingredient and packaging suppliers (addressed in Part I), More Life Nutrition's digital operations depend on the following technology and service providers:

Partner Type	Role	Current Status	Strategic Priority
E-Commerce Platform (morelife.tn)	Primary direct sales channel; product discovery, checkout, and post-purchase communication hub.	Operational but undermined by persistent stockout display and absence of nutritional data on product pages.	Critical — resolve stockout UX and add nutritional facts to all product pages within 60 days.
Social Media Platforms (Instagram, TikTok, Facebook)	Primary consumer discovery, engagement, and brand-building channels.	Accounts active but posting frequency insufficient (below 3×/week); zero TikTok strategy in place.	High — establish consistent content calendar and TikTok presence immediately.
Email Marketing Provider (e.g.,	Subscriber nurture, loyalty communication, new product launches,	Not yet implemented in a structured way.	High — launch subscriber capture and welcome sequence within 90 days.

Partner Type	Role	Current Status	Strategic Priority
Mailchimp / Brevo)	and abandoned-cart recovery.		
Delivery Platforms (Glovo, Yassir Tunisia)	On-demand urban delivery for impulse purchase occasions; expands reach to consumers who do not plan purchases in advance.	Not yet listed on major delivery platforms.	Medium — priority listing to capture urban impulse-purchase occasions.
Analytics & CRM (Google Analytics, Meta Pixel)	Track visitor behaviour, ad performance, conversion rates, and customer lifetime value.	Meta Pixel status unconfirmed; Google Analytics implementation unknown.	High — implement full tracking stack before scaling paid media investment.

4. Online Marketing Intermediaries

More Life Nutrition reaches its digital consumers through a combination of owned channels and intermediary platforms that aggregate consumer attention and purchasing behaviour.

- Owned E-Commerce (morelife.tn): The brand's primary direct channel. Currently the most important platform for brand storytelling, full product presentation, and margin-accretive sales. Requires immediate improvement in inventory display, nutritional data presentation, and mobile UX optimisation.
- Instagram Shop & Facebook Marketplace: Social commerce integrations that allow consumers to purchase directly within the social app experience — removing friction at the conversion stage. Currently underutilised by More Life Nutrition relative to competitors.
- Tunisiebio Online Store: The brand's specialty health-retail partner maintains its own e-commerce presence, providing a second digital discovery point for health-conscious consumers researching clean-label products.

Payment Gateway Strategy

- Local payment methods — e-Dinar, D17, Mobiflouss, and cash-on-delivery — must be maintained across all digital purchase touchpoints. A significant portion of Tunisian digital consumers do not hold international payment cards, and excluding local methods creates a direct conversion barrier.
- For international e-commerce expansion (GCC, Europe), Stripe or PayPal integration will be required. This should be implemented as part of the MENA market entry planning.

5. Digital Publics

The following groups influence More Life Nutrition's digital reputation, reach, and credibility without being direct purchasers.

Public	Digital Role	Engagement Approach
Fitness Micro-Influencers (5K–50K followers)	Most impactful brand-awareness driver for the primary target segment. Authentic integration into workout content outperforms paid advertising for health-food brands.	Identify 8–12 Tunisian fitness micro-influencers with genuine nutritional credibility. Provide product seeding with a personalised gifting package; offer affiliate commission codes (15–20%) to incentivise ongoing content creation without large upfront fees.
Licensed Nutritionists & Dietitians	Third-party credibility endorsement that validates health claims and neutralises consumer scepticism toward unverified 'free-from' marketing.	Partner with one or two registered Tunisian nutritionists for Instagram content (e.g., 'Why I recommend Power Cups as a post-workout snack'). Publish endorsements on product pages and in email communications.
Food & Wellness Media (Digital Publications, Podcasts)	Earned media coverage that reaches audiences the brand cannot target efficiently through paid channels.	Prepare a bilingual digital press kit (French/Arabic) with high-resolution product photography, nutritional data (once published), founder story, and brand manifesto. Pitch to Tunisian food and wellness editors at Réalités, Tunisia Today, and emerging wellness podcasts.
Online Health & Fitness Communities (Facebook Groups, Reddit)	Word-of-mouth at scale — authentic peer recommendations within trusted communities carry higher purchase influence than any paid ad.	Participate authentically in Tunisian fitness and nutrition Facebook groups. Seed product with community admins and high-engagement members. Monitor and respond promptly to all brand mentions.
Tunisian Diaspora Facebook Groups & WhatsApp Networks	High-conversion audience with above-average disposable income and strong emotional connection to Tunisian brands. Peer referral within diaspora networks is exceptionally effective.	Deploy culturally resonant content (local pride, ingredient origin, founder story) on diaspora-facing Facebook groups. Activate referral programme with international shipping incentives.

B. Digital Macro-Environment Analysis

The following analysis identifies the macro-level digital forces that shape More Life Nutrition's online marketing opportunities and risks.

1. Economic Environment

- Tunisia's e-commerce market, which reached \$214.3 million by 2025 (CAGR 10.2%) and continues to expand into 2026 and beyond, provides a rapidly growing structural channel for direct-to-consumer health food brands. More Life Nutrition's owned e-commerce platform (morelife.tn) is directly positioned to capture this growth — provided the stockout and nutritional data gaps are resolved.
- Despite broader economic pressures and Tunisian dinar volatility, the premium health-food segment continues to attract spending from urban middle-to-high-income consumers and the diaspora market — both of which represent More Life Nutrition's primary digital audiences.
- Rising ingredient costs (particularly pistachio and cocoa) create margin pressure that can only be sustainably absorbed through premium brand positioning and higher average order values — outcomes that a stronger digital presence and content strategy directly enable.
- Consumer spending in Tunisia reached approximately 107,937 million TND in 2025, with a projected increase to 109,556 million TND in 2026. While macroeconomic challenges affect discretionary spending broadly, the health-conscious premium segment demonstrates above-average spending resilience.

2. Political Environment

- The Tunisian government actively supports local and small food producers through grants, export incentives, and cultural heritage initiatives. More Life Nutrition, as a locally produced Halal-certified food brand, is positioned to access these programs — particularly APEX-Tunisie export promotion resources — which could subsidise digital marketing investment in MENA markets.
- Export promotion policies create digital marketing opportunities: government-backed participation in MENA food and wellness trade events and digital marketplaces could accelerate brand awareness in GCC markets without proportionate capital outlay.
- Political instability in Tunisia or changes to import regulations could disrupt digital fulfilment logistics, particularly for the diaspora e-commerce segment (France, Canada, Germany). Building digital delivery partnerships with international logistics providers early mitigates this risk.
- Anticipated regulatory updates to Tunisian food labelling laws are expected to mandate published nutritional data on packaged food products. Rather than treating this as a compliance burden, More Life Nutrition should proactively publish full nutritional facts — transforming a regulatory requirement into a brand credibility asset.

3. Social Environment

- Growing Health & Wellness Consciousness: The single most powerful macro-trend in the brand's favour. Urban Tunisian consumers — particularly the 18–40 demographic — are increasingly integrating healthy eating, gym culture, and mindful consumption into their identity. This creates a large and expanding digital audience that is actively seeking brands like More Life Nutrition.

- **Clean Label Movement:** Consumer demand for minimal, recognisable ingredient lists is accelerating globally and arriving in Tunisia. Power Cups' three-ingredient formula is a direct response to this trend — and should be the centrepiece of all digital content, not a footnote.
- **Social Media as the Primary Food Discovery Channel:** Among the 18–35 target demographic, Instagram and TikTok are the dominant channels through which new food and snack products are discovered. A brand that is not visually present and consistently active on these platforms does not exist in the consideration set of this consumer group.
- **Cultural Pride & Support for Local Brands:** A measurable and growing preference for Tunisian-made products is evident across urban consumer communities and diaspora networks. Digital storytelling that celebrates local production, the Kelibia manufacturing heritage, and the founder's mission resonates with both domestic and diaspora audiences.
- **Fitness Community Growth:** Gym memberships, running clubs, CrossFit communities, and online fitness groups are expanding rapidly in urban Tunisia. These communities are natural digital audiences for Power Cups and represent an untapped channel for community-based marketing.

4. Technological Environment

- **Internet Penetration:** Tunisia's internet penetration reached approximately 80% in 2024 (~9.96 million users), enabling broad digital reach for e-commerce and social media marketing strategies. Mobile internet accounts for the majority of this usage — making mobile-first design a non-negotiable requirement for morelife.tn.
- **Instagram & TikTok Algorithm Dynamics:** Both platforms currently favour short-form video content (Reels, TikTok videos) in organic reach distribution. Brands that produce high-quality, consistent video content receive disproportionate organic reach relative to static posts — making video production capability a core digital marketing asset.
- **Augmented Reality (AR) Shopping:** AR tools that allow consumers to visualise products in real-world contexts (e.g., 'snap a photo of your gym bag and see a Power Cup next to it') are emerging as a conversion tool for premium food and lifestyle products. This is a medium-term digital innovation opportunity for morelife.tn.
- **AI-Powered Personalisation & Retargeting:** Meta and TikTok's advertising platforms offer sophisticated audience targeting and retargeting capabilities that allow precise re-engagement of website visitors, video viewers, and social engagers — at cost levels accessible to a small brand. Implementing the Meta Pixel and TikTok Pixel on morelife.tn is an immediate priority.
- **Inventory Management & Real-Time Stock Synchronisation:** Technology solutions that synchronise physical inventory with digital storefront display can eliminate the stockout problem that currently destroys purchase intent at the conversion stage. This is the single most impactful operational technology investment available to the brand.
- **WhatsApp Business API:** WhatsApp is the primary communication channel for Tunisian consumers post-purchase. A WhatsApp Business account with automated order confirmation, delivery tracking, and customer service capability dramatically improves the post-purchase experience and drives repeat purchase rates.

5. Environmental Forces

- **Sustainable Packaging as a Digital Asset:** Consumer and regulatory pressure toward eco-friendly packaging creates a digital storytelling opportunity. Announcing a transition to biodegradable or reduced-plastic packaging — backed by visible evidence (production videos, certification) — would generate earned media coverage and strengthen brand positioning among eco-conscious consumers.

- **Ingredient Sustainability Narrative:** More Life Nutrition's minimal ingredient philosophy (three natural ingredients; no artificial additives or preservatives) is inherently aligned with sustainability values. Digital content that frames this as an environmental commitment — not just a health feature — would expand the brand's appeal to the growing eco-conscious consumer segment.
- **Climate Risk & Supply Chain Transparency:** Growing consumer interest in food supply chain transparency (where ingredients come from, how they are sourced) creates an opportunity for 'farm-to-cup' digital storytelling that no direct competitor is currently executing. This builds both brand authenticity and supply chain resilience awareness.

6. Legal Environment

- **Nutritional Data Compliance:** Tunisian food labelling regulations require nutritional information on packaged food products. The current absence of published nutritional data represents both a compliance risk and a critical digital credibility gap. Publishing full, verified nutritional facts on all product pages and packaging within 60 days is the single most legally and commercially urgent action available to the brand.
- **Digital Advertising Regulations:** Social media advertising targeting minors, making unsubstantiated health claims ('cures,' 'prevents disease,' etc.), or deploying misleading pricing is subject to increasing regulatory scrutiny in Tunisia and in target export markets (GCC, EU). All digital content must be reviewed for compliance before paid amplification.
- **E-Commerce Consumer Protection:** Tunisian consumer protection law requires clear return policies, accurate product descriptions, and transparent pricing on e-commerce platforms. Compliance with these requirements on morelife.tn — and on any international marketplace listings — must be verified before scaling digital sales.
- **Intellectual Property:** The More Life Nutrition brand name, Power Cups product name, and packaging design should be formally registered as trademarks. As digital visibility grows, the risk of imitation increases — trademark registration is a protective investment that costs little relative to the brand equity it protects.
- **HACCP & ISO 22000 Certification:** Export to MENA and EU markets via digital channels will require internationally recognised food safety certifications. Initiating the HACCP certification process now is a strategic investment that unlocks future digital marketplace listings in GCC and European markets.

Key Insight: *The digital macro-environment is overwhelmingly favourable for Power Cups: health consciousness is rising, internet penetration is broad, social media food discovery is accelerating, and local brand preference is growing. The primary digital risks are self-imposed — an unresolved stockout problem, absent nutritional data, and an inconsistent content presence. These are operational issues, not market failures. Solving them unlocks a favourable market that is already waiting.*

III. Digital Strategy

Social Media Framework for Power Cups

The Social Media Marketing Funnel provides the most appropriate strategic framework for More Life Nutrition at its current stage — a brand with a genuinely differentiated product but insufficient digital awareness and a limited paid media budget. The framework prioritises rapid awareness-building while nurturing the trust and community depth required for long-term brand loyalty.

- **Awareness:** Instagram Reels and TikTok are the primary awareness engines. Short-form video content — ingredient close-ups, production process footage, and influencer workout integrations — reaches health-conscious consumers who have not yet encountered Power Cups. Organic reach on these platforms currently rewards consistent, high-quality video content at a cost accessible to a small brand.
- **Consideration:** nutritional education posts, founder storytelling, and customer review features move engaged followers from awareness to active interest. Directing this traffic to morelife.tn via clear calls-to-action (link in bio, swipe-up Stories, direct website links in TikTok bios) bridges the social-to-e-commerce conversion gap.
- **Conversion:** Influencer discount codes, first-order incentives, retargeting ads to website visitors, and a streamlined mobile checkout experience on morelife.tn convert consideration into purchase. Resolving the stockout display problem is a prerequisite — a customer who reaches the product page and sees 'out of stock' is lost.
- **Evangelism:** A dedicated UGC hashtag campaign (#PowerUpYourDay), a referral code programme, and the active reposting of customer content on the brand's channels transforms satisfied buyers into brand advocates. This is the highest-leverage marketing investment available — peer recommendations carry more purchase influence than any paid advertisement.

IV. Marketing Objectives

A. Business Goals

- **Awareness:** Establish More Life Nutrition as the most recognised premium healthy-indulgence snack brand in Tunisia's digital health-food space by end of 2027.
- **Consideration:** Build verifiable trust and genuine curiosity among health-conscious consumers through consistent, nutritionally credible content and authentic brand storytelling.
- **Conversion:** Generate sustainable, growing direct-to-consumer revenue through morelife.tn, with a secondary revenue stream via Glovo, Yassir, and specialty retail digital channels.

B. Digital Marketing Objectives (SMART — REAN Framework)

The following SMART objectives are structured around the REAN model (Reach, Engage, Activate, Nurture) and linked to measurable KPIs:

REAN Stage	SMART Objective	Key KPIs	Target Date
♦ Reach(Awareness)	Reach 25,000 highly targeted unique users across Instagram, TikTok, and Facebook through a combination of organic content and paid amplification.	Total reach per post; follower growth rate; impressions per campaign; cost per 1,000 impressions (CPM).	October 2026
♦ Engage(Consideration)	Achieve an average engagement rate of 15% across Instagram and TikTok posts (likes, saves, shares, comments) — benchmarked against the Tunisian health-food category average of approximately 5–8%.	Engagement rate per post; saves and shares (highest-quality engagement signals); Story views and swipe-up rate; DM volume.	August 2026
♦ Activate(Conversion)	Convert 8% of morelife.tn website visitors into paying customers within six months of implementing the nutritional data update and stockout resolution.	Website conversion rate; cart abandonment rate; average order value (AOV); influencer promo code redemption rate.	December 2026
♦ Nurture(Evangelism)	Convert 50% of first-time buyers into repeat purchasers within 90 days through a structured email nurture sequence, loyalty bundle pricing, and a UGC referral programme.	Repeat purchase rate; referral code usage; email open and click-through rates; UGC volume (#PowerUpYourDay tag usage).	March 2027

 **Key Insight:** *These objectives are sequenced deliberately: Reach before Engagement, Engagement before Conversion, Conversion before Advocacy. Attempting to scale paid reach without first resolving the stockout problem and nutritional data gap would spend budget to acquire visitors who cannot convert. Fix the funnel first — then amplify.*

C.Customer persona

POWER CUPS · CUSTOMER PERSONA

Nour Ben Salem

👤 Age 26

🏠 Personal Trainer & Fitness Coach

📍 Tunis, Tunisia

Fitness-First

Clean Eating

Label Reader

Repeat Buyer

♥ INTERESTS

- Fitness training, CrossFit & sports nutrition
- Clean eating & high-protein snacking
- Reading ingredient labels & comparing macros
- Supporting local Tunisian health brands
- Sharing workout & healthy lifestyle content

☆ MOTIVATION

- Needs a post-workout snack that is both nutritious and genuinely enjoyable
- Refuses to compromise on taste or health — Power Cups satisfy both
- Recommends trusted products to her gym clients and social media followers
- Proud to support locally made Tunisian products over imported alternatives

📁 WEBOGRAPHICS

Instagram & TikTok

Follows fitness influencers, personal trainers, and clean-eating content creators. Saves Reels featuring product reviews and workout nutrition tips

Facebook

Active in Tunisian fitness and healthy lifestyle groups. Shares product recommendations with her gym community via WhatsApp and group posts

Web

Visits morelife.tn and Tunisiebio to check ingredients and compare flavors. Reads nutrition blogs and watches YouTube workout & meal prep content

Devices

Smartphone for daily browsing and social media — laptop for deeper research before bulk purchases

Engagement

3–4 hrs/day online — highly interactive: saves, shares, comments, and DMs brands directly. Responds strongly to Stories, short videos, and promo codes

🎯 HOW TO MARKET TO NOUR

📺

Instagram & TikTok Reels

Show Power Cups in real workout contexts — pre-training energy, post-training recovery, gym bag essentials

👤

Fitness Micro-Influencers

Partner with Tunisian trainers she already follows — affiliate promo codes convert her trust into sales

📄

Publish Nutrition Data

Display full macros (protein, calories, sugar, fat) on every product page — she will not buy without them

💬

WhatsApp & Gym Communities

Activate a referral programme — she shares codes in her gym WhatsApp groups organically

❤

UGC & #PowerUpYourDay

Repost her content, feature her on the brand page — recognition turns her into a loyal advocate

📦

Bulk Pack Loyalty Offers

She prefers 10× bulk packs — reward her with early flavor access and exclusive bundle pricing

Persona 2 — Khalil Mansour

Profile	Interests	Motivation	Digital Behaviour
Age 32, software engineer in Tunis. Busy professional, keto-curious, label reader, and convenience seeker.	Intermittent fasting, low-sugar diets, productivity, running, home workouts, Tunisian start-ups, and tech content.	Needs a quick, clean snack that does not break his diet. He mistrusts vague claims and requires full nutrition facts before buying.	Uses Google, YouTube, Instagram, and product pages to verify information. Converts when he sees macros, reviews, and reliable delivery/payment options.

Persona 3 — Sarra Belhaj

Profile	Interests	Motivation	Digital Behaviour
Age 38, HR manager and mother of two in Sousse. Secondary but valuable family-oriented customer.	Family nutrition, natural snacks, school lunch ideas, parenting groups, local brands, and additive-free products.	Wants a snack she can confidently give to her children. She needs visible Halal certification, simple ingredients, reviews, and clear trust signals.	Most active on Facebook and WhatsApp. Influenced by peer recommendations, mother groups, family bundles, and customer reviews rather than aesthetic content alone.

Key insight: Across all personas, the same barriers appear: missing nutrition facts, unclear stock availability, and limited trust proof. These issues must be solved before larger advertising investment.

Secondary Segments

The diaspora segment and B2B fitness studio owners remain interesting opportunities, but they should not be treated as core priorities yet.

Diaspora consumers can be targeted later if More Life confirms international shipping, transparent delivery costs, and international payment methods such as Stripe or PayPal.

B2B buyers, such as gyms and fitness studios, can be approached after stock reliability improves and a clear wholesale offer is added to the website.

2. Digital Marketing Planning and Metrics:

Simplified One-Page Digital Marketing Plan

This table merges awareness, consideration, and conversion into one practical plan. It avoids repeating the same channel tactics for each persona.

Channel / Tool	Main Action	Priority Target	Main KPI
Website and Product Pages	Fix the stockout experience, add nutrition facts, ingredient explanations, Halal proof, reviews, and FAQs.	All personas	Product page conversion rate, add-to-cart rate, bounce rate
Instagram and TikTok	Post Reels/TikToks showing product cuts, ingredient close-ups, post-workout use, and behind-the-scenes production.	Nour and Khalil	Reach, saves, shares, profile visits, website clicks
Fitness Micro-Influencers	Partner with 5-8 credible Tunisian fitness creators using product seeding and affiliate codes.	Nour	Promo code sales, story reach, UGC volume
SEO and Blog Content	Publish short articles around healthy snacks Tunisia, no added sugar snack, post-workout snack, keto snack Tunisia, and school snack ideas.	Khalil and Sarra	Organic traffic, keyword ranking, blog-to-product clicks
Facebook and WhatsApp	Use parent-friendly messages, peer recommendations, referral codes, and customer support through WhatsApp.	Sarra	Messages, referrals, click-through rate, repeat orders
Email Marketing	Launch welcome sequence, abandoned cart recovery, new flavour updates, and bundle reminders.	All buyers	Open rate, click rate, cart recovery, repeat purchase rate
Paid Search and Retargeting	Run small-budget Google/Meta ads only after stock and nutrition data are fixed. Retarget product viewers and cart abandoners.	Warm prospects	CPA, ROAS, conversion rate, cart recovery

. Budgeting and Resources

The original budget range is kept, but the persona-based budget table is removed because it repeats the same information. The simplified budget below is enough for a clear academic report.

Budget Item	Low Estimate Q1	High Estimate Q1	Purpose
Social Media Content and Boosting	3,000 TND	4,500 TND	Highest priority: Reels, TikTok videos, Facebook boosts
Influencer Seeding	1,000 TND	2,000 TND	5-8 credible micro-influencers instead of too many low-quality partnerships
SEO and Blog Content	900 TND	1,200 TND	Short SEO articles + optimized product pages
Paid Search / Retargeting	900 TND	1,500 TND	Small test budget after website fixes
Email / WhatsApp Tools	500 TND	800 TND	Welcome emails, cart recovery, customer support
Buffer and Testing	500 TND	1,000 TND	A/B testing and extra creative tests
TOTAL	6,800 TND	11,000 TND	Lean budget after removing unnecessary LinkedIn-heavy spending

Social Media Campaign Planning

The campaign plan should focus on three main campaigns instead of many overlapping campaigns. The diaspora campaign can be kept as a future expansion option, not as a core 2026 priority.

Campaign	Primary Channel	Concept	Target	Target Metric
Power Up	Instagram Reels + TikTok	Show Power Cups in post-workout routines, product cuts, and fitness creator integrations.	Nour / fitness segment	12,000 targeted users
3 Ingredients. No Compromise.	TikTok + Instagram + Website	Educate users on the simple ingredient list, production process, and nutrition facts.	Khalil / label readers	100,000 TikTok views and 5,000 profile visits
School Snack, Sorted	Facebook + WhatsApp	Promote family-safe snacking with Halal certification, no additives, and simple ingredients.	Sarra / parent segment	5,000 parent-segment reach

Taste of Home (Future Phase)	Facebook diaspora groups + Instagram	Use cultural pride and Tunisian identity only after international shipping/payment are confirmed.	Diaspora	Pilot campaign only
---------------------------------	---	---	----------	---------------------

Channel Selection and Messaging

Channel	Role	Recommended Content
Instagram	Primary visual storytelling and product discovery channel.	Ingredient close-ups, Reels, Story polls, influencer content, product tags.
TikTok	Awareness and education for younger health-conscious consumers.	Short process videos, "what is inside" content, trend-based product moments.
Facebook	Trust-building for parents and community groups.	Family-safe messaging, Halal visibility, parent testimonials, boosted posts.
WhatsApp	Post-purchase support, referrals, and customer reassurance.	Order updates, referral codes, customer questions, loyalty reminders.
Google Search / SEO	Capture users already searching for healthy snack solutions.	Optimized product pages, blog articles, meta titles, internal links.

Recommended taglines:

- 3 ingredients. No compromise. Made in Tunisia.
- Real nut butter. Dark chocolate. That is it.
- Power your day - the honest way.
- From Kelibia to your gym bag.

Timing and Integration

Timeframe	Campaign Focus	Integration
April - May 2026	Website credibility fixes + Power Up campaign launch	Add nutrition facts, improve stock display, prepare influencer seeding.
June - July 2026	TikTok education series + fitness creator partnerships	Summer gym season; activate affiliate codes and short-form video schedule.
August - September 2026	Parent-friendly Facebook and WhatsApp campaign	Back-to-school timing; promote family bundles and trust messages.
October 2026	UGC and referral push	Review reach target, retarget warm audiences, collect testimonials.

November 2026 - March 2027	Loyalty and repeat purchase phase	Email nurture, WhatsApp referrals, bundle offers, seasonal Ramadan edition.
----------------------------	-----------------------------------	---

Testing and Optimization

Pre-testing and post-testing should be merged into one optimization section. This avoids repetition and makes the process clearer.

Test Variable	Variant A	Variant B	Decision Metric
Visual creative	Ingredient close-up	Lifestyle / post-workout use	Save rate and watch time
Headline	3 ingredients. No added sugar.	Eat what you love. Keep what you believe in.	CTR and engagement rate
Landing page	Nutrition facts first	Flavour grid first	Add-to-cart rate
CTA	Shop Now	Discover Your Flavour	Click-through rate
Influencer content	Macro explanation	Unboxing/reaction	Promo code redemption

KPI Dashboard

The KPI dashboard below uses more realistic targets than the original version. It keeps the campaign ambitious but credible.

Metric	Realistic Target	Measurement Tool
Total unique reach	25,000 users by October 2026	Meta Business Suite, TikTok Analytics
Website traffic increase	+15% after SEO and social traffic improvements	Google Analytics 4
Engagement rate	5-8% average on Instagram and TikTok	Instagram Insights, TikTok Analytics
Conversion rate	2-4% after stock and nutrition fixes	Shopify Analytics / website analytics
Email open rate	30-35% for welcome sequence	Mailchimp or Brevo
Repeat purchase rate	20-30% within 90 days	Shopify Analytics / CRM
Cost per acquisition	Below 8-10 TND after optimization	Meta Ads Manager, Google Ads
Influencer redemptions	20-50 redemptions per active influencer per month	Discount code tracking

Digital Metrics Planning Table

Metric Type	Digital Metrics	REAN Stage	Application to Power Cups
Customer volume	Website traffic, followers, content views, reach	Reach	Track growth from Reels, TikTok videos, SEO, and influencer content.
Customer value	Conversion rate, AOV, CLV	Activate	Use bundles and multipacks to increase average order value.
Availability	Stock availability, product page availability, delivery platform presence	Engage / Activate	Track stockout frequency and fix product availability before paid ads.
Financial efficiency	CPC, CPA, ROAS	Activate	Evaluate paid ads monthly and stop weak campaigns quickly.
Customer loyalty	Repeat purchase rate, referrals, email clicks	Nurture	Measure the effect of loyalty bundles, WhatsApp referrals, and early access offers.
Brand trust	Reviews, NPS, UGC volume, comments sentiment	Engage / Nurture	Use customer feedback and UGC as proof of credibility.

Final Strategic Recommendation

The revised strategy should be shorter, clearer, and more focused than the original version. More Life Nutrition should not try to communicate to every segment with equal intensity. The brand should first win the core Tunisian health-conscious audience through trust, proof, and consistent digital content. Once stock reliability, nutrition data, and product-page credibility are fixed, the brand can scale paid ads, expand influencer partnerships, and explore diaspora and B2B opportunities.
